Northern California Chaparral Fire Hazard Summit

On May 19th

At UC Hopland Research & Extension Center

Participants will learn about fuel hazard reduction treatments and their relationship to fire hazards, chaparral ecology, birds, small mammals, & plant communities, tour a 10-year old fire/fire-surrogate study, and help build a decision support tool that focuses on these key questions: *Should we treat or accept fuel hazard?* If treatments occur, *What treatment should be used?*, and *When should treatments occur?*
